

Explanation of the information contained within a Taskforce on Climate Related Financial Disclosures (TCFD) Product Report

Section 1 – Emissions and climate data

The TCFD Product Report contains data for carbon emissions, and other greenhouse gases (GHGs), that when emitted into the atmosphere are responsible for the greenhouse effect (global warming) on the planet. Carbon dioxide (CO₂e) is a standard way to compare the emissions of different greenhouse gases. The choice of this metric and the below measurement and scenarios follows best practice recommendations from the TCFD.

Please refer to the ‘**How we measure and calculate**’ section for more details on the metrics below. We aim to use language that is easy to understand. Where we have had to use terms that you may not be familiar with we have provided definitions. The terms will be highlighted in **brown** and an explanation of their meaning can be found in the ‘**Terms explained**’ section.

To provide context for the below metrics, 1 tonne of CO₂e approximately represents:

Economy return flight from London to New York
Source: Planetair travel calculator

138 meat-based meals
Source: Carbon Equity

To capture 1 tonne of CO₂ approximately 50 trees must grow for one year
Source: Climate Neutral Group

Total Carbon Emissions

The total greenhouse gas/carbon emissions of the Fund, in tonnes of CO₂e. It includes Scope 1 and Scope 2 emissions.

Scope 1 Emissions

These are greenhouse gas emissions owned and controlled directly by the companies that the Fund invests in. For example, through company vehicles, company office space and equipment, and the energy used in production of goods or services.

Scope 2 Emissions

These are emissions that the companies, which the Fund invests in, make indirectly via consumption of purchased heat, steam or electricity, all of which are produced on its behalf and owned by another.

Weighted Average Carbon Intensity (WACI)

Weighted average carbon intensity is a standard measurement to understand emissions after adjusting for the size of a company. This metric portrays the amount of carbon produced relative to the varying sizes of companies held within the Fund.

Carbon Footprint

A carbon footprint demonstrates activities that result in greenhouse gas emissions. This metric highlights the Fund’s carbon footprint relative to activities and market value.

Implied temperature alignment

This is the suggested global climate temperature outcome the Fund is compatible with, by the year 2100. The approach reflects the link between companies’ carbon emissions and global warming outcomes. **The Paris Climate Agreement** aims to limit global warming to well-below 2°C, ideally 1.5°C.

Assets that are measured for climate reporting

Your money can be invested in one or more funds containing one or more asset classes. Example Asset classes include things like equities (company shares), bonds (loans to governments and companies), property and cash. Assets can only be measured for climate reporting where relevant and where sufficient climate data is available to do so. So, for example, and according to data availability the asset classes that can be measured are:

- Equities and corporate bonds for the 'total carbon emissions,' 'scope 1 emissions' and 'scope 2 emissions'.
- Equities, corporate bonds and government (sovereign) bonds for 'weighted average carbon intensity,' 'carbon footprint' and 'implied temperature alignment.'

However, some equities or bonds may not be included where meaningful data cannot be provided or where they are not included in the asset mix of the fund. Whilst some metrics measure the same assets, the data availability may vary per metric. The **asset coverage** figures provided in the metrics, show the percentage of assets that provided meaningful data and are eligible for this type of climate reporting.

How we measure and calculate:

Total Carbon Emissions

Total including Scope 1 and 2 emissions. We measure this for companies that we hold within a fund's asset mix, through bonds and/or equities. It is based on the share of emissions we will hold in a particular company through the amount of investment held. This is done by calculating the company's overall emission total against the percentage share we have in that company as part of a fund's holdings. The amount of carbon dioxide equivalent (**CO₂e**) calculated per company is then combined into an overall total for the percentage of eligible assets.

Scope 1 emissions

By using the same calculation method for total carbon emissions, we measure this for the proportion of companies that we hold within a fund's asset mix, through bonds and/or equities, for their scope 1 emissions.

Scope 2 emissions

By using the same calculation method for total carbon emissions, we measure this for the proportion of companies that we hold within a fund's asset mix, through bonds and/or equities, for their scope 2 emissions.

Weighted Average Carbon Intensity (WACI)

We measure a tonne of carbon dioxide equivalent (**CO₂e**) emissions per £1million revenue (income generated from company as sourced in year-end financial statements). The overall total is a **weighted average** of all companies and sovereigns (various types of bonds, which are long and short term loans to local and national governments) included within a fund. WACI gives an emissions intensity metric based on the amount of carbon produced for each £1m of revenue generated by the companies invested in.

Carbon Footprint

To calculate the carbon footprint associated with this Fund, we take the 'total carbon emissions' figure and calculate a **weighted average** against the overall market value of all companies and sovereigns (various types of bonds, which are long and short term loans to local and national governments) within a fund. This is a way to measure emissions relative to market size. Carbon Footprint also acts as an emissions intensity metric, which is the volume of emissions (metric tonne of carbon dioxide, **CO₂e**) per £1million of enterprise value. By looking at an intensity value you can adjust for the size of a fund to compare the funded emissions for different fund sizes.

Implied temperature alignment

Based on a combination of historical and forward-looking data, activities and targets, a score is calculated for each of the underlying equities, corporate bonds and sovereign/government bonds held within a fund, then combined to give the implied temperature alignment of the overall fund.

Terms explained

CO₂e

CO₂ stands for carbon dioxide. The 'e' stands for equivalent. CO₂e is a metric that allows comparison of emissions from various greenhouse gases to the equivalent measure of carbon dioxide.

Asset coverage

The percentage of the fund's asset classes that were measured. The asset classes that can be measured are equities (company shares) and government and corporate bonds. Some funds may include one or more of these asset types.

Paris Climate Agreement

To address global warming, the international climate change treaty, the Paris Climate Agreement, aims to limit and hold the world's average temperature rise to well-below 2°C (ideally 1.5°C) by the year 2100. Currently, the Earth is already about 1.1°C warmer than it was in the late 1800s (pre-industrial).

Weighted average

A weighted average accounts for the relative importance and size of the different assets that are included. We will hold varying levels of assets within a fund, for example we may hold more shares in one company over another. We use a weighted average to allow for the different importance of the carbon data for assets according to size held, based on the market value at the reporting date. This weighted average paints a clearer picture than an equally split average would.

Stewardship

Stewardship refers to actions that LGIM can / will be taken with the aim of delivering positive change on behalf of our clients on a broad range of ESG issues; exercising voting rights for example or with engaging companies, policymakers and other stakeholders on issues such as the living wage, deforestation, or board-level ethnic diversity for example.

Our Investment Stewardship team exercises voting rights globally across LGIM's active and index funds, holding companies to account on the issues that matter most to our clients. These range from climate change to board independence and diversity.

Section 2 - Climate scenario and risk analysis

To address global warming, the international climate change treaty, the Paris Climate Agreement, aims to limit and hold the world's average temperature rise to well-below 2°C (ideally 1.5°C) by the year 2100. Currently, the Earth is already about 1.1°C warmer than it was in the late 1800s (pre-industrial). To help achieve this, the aim is to achieve net zero carbon emissions globally by 2050. Net zero means cutting carbon dioxide (CO₂) to as close to zero as possible, with remaining emissions re-absorbed or removed from the atmosphere, by oceans, forests or carbon capture technology for instance. At the same time, it also requires deep reductions in other greenhouse gases, particularly methane.

This means that we need to move to an economy built on sustainable actions that result in less environmental impact, known as transitioning to a low-carbon economy. This will bring associated transition risks and opportunities. In addition to ongoing risks from the changes in extreme weather events, a successful adjustment will involve significant changes to climate-related policy, regulations and law; use of technology; and business and government strategies.

Depending on how well businesses and governments transition, this will have a ripple effect on areas like reputation and trust, business and market performance, supply and demand of materials and goods.

Against this backdrop, scenario analysis, based on climate scenario modelling, helps us to explore a range of possible climate futures and understand potential climate-related risks.

We consider three temperature scenarios. The scenarios have a forecast time horizon to 2050, with narratives defined by their probable temperature outcome in 2100 (compared to pre-industrial temperatures in the 1800s). These are possible pathways, rather than predictions or probabilities. They are an exercise in what could happen, not in predicting what will happen.

Opportunities

While we have identified potential risks, companies and governments that can effectively plan and participate in the move to a more sustainable economy over the next 10 years - creating a decade of delivery – can also create opportunities. A number of opportunities exist to gain market share and public trust, reduce costs and emissions, while benefiting the planet. In particular, we should expect to see some opportunities for companies with capabilities in electric vehicles, green fuels, technology, renewables and critical minerals.

ORDERLY TRANSITION SCENARIO

Immediate, ambitious policy and investment action to address climate change succeeds in limiting global warming to well-below 2°C.

Terms explained

Carbon pricing

A carbon price is the price that a company would have to pay for each tonne of CO₂e emitted.

Stranded assets

This means an asset (such as a coal-fired power plant) that once had value or produced income but no longer does. This is usually due to some kind of external change, including changes in technology, markets, regulations and societal behaviours.

Low-carbon technologies

These are technologies that produce low levels of CO₂ emissions, or no net emissions. Examples include wind turbines, solar power, ground source heat pumps.

DISORDERLY TRANSITION SCENARIO

Policy and investment action to limit global warming to well-below 2°C is delayed by 10 years, resulting in much more disruptive change from 2030.

HOTHOUSE WORLD SCENARIO

Global failure to act on climate change means emissions continue to grow at historical rates

Key risks

The value of an investment and any income taken from it is not guaranteed and can go down as well as up, you may not get back the amount you originally invested.

Important information

This document is not a financial promotion nor a marketing communication.

It has been produced by Legal & General Investment Management Limited and/or its affiliates ('Legal & General', 'we' or 'us') as thought leadership which represents our intellectual property. The information contained in this document (the 'Information') may include our views on significant governance issues which can affect listed companies and issuers of securities generally.

It intentionally refrains from describing any products or services provided by any of the regulated entities within our group of companies, this is so the document can be distributed to the widest possible audience without geographic limitation.

No party shall have any right of action against Legal & General in relation to the accuracy or completeness of the Information, or any other written or oral information made available in connection with this publication. No part of this or any other document or presentation provided by us shall be deemed to constitute 'proper advice' for the purposes of the Pensions Act 1995 (as amended).

Limitations:

Unless otherwise agreed by Legal & General in writing, the Information in this document (a) is for information purposes only and we are not soliciting any action based on it, and (b) is not a recommendation to buy or sell securities or pursue a particular investment strategy; and (c) is not investment, legal, regulatory or tax advice. To the fullest extent permitted by law, we exclude all representations, warranties, conditions, undertakings and all other terms of any kind, implied by statute or common law, with respect to the Information including (without limitation) any representations as to the quality, suitability, accuracy or completeness of the Information. The Information is provided 'as is' and 'as available'. To the fullest extent permitted by law, Legal & General accepts no liability to you or any other recipient of the Information for any loss, damage or cost arising from, or in connection with, any use or reliance on the Information. Without limiting the generality of the foregoing, Legal & General does not accept any liability for any indirect, special or consequential loss howsoever caused and on any theory or liability, whether in contract or tort (including negligence) or otherwise, even if Legal & General has been advised of the possibility of such loss.

Third Party Data:

Where this document contains third party information or data ('Third Party Data'), we cannot guarantee the accuracy, completeness or reliability of such Third Party Data and accept no responsibility or liability whatsoever in respect of such Third Party Data.

Publication, Amendments and Updates:

We are under no obligation to update or amend the Information or correct any errors in the Information following the date it was delivered to you. Legal & General reserves the right to update this document and/or the Information at any time and without notice.
